Scope of the Position:

Under the general direction of the 21 Century Project's Technology Security Manager (DPM II), the Senior Information Systems Analyst is a member of the 21st Century Project, chartered to replace the State's current payroll, employment history, and leave accounting system with the ERP 2005 software product. The incumbent plays a key role in providing technical security expertise and leadership to the application security team. The incumbent performs the most complex systems analysis, design, implementation, problem resolution, and execution of the SAP application security software solution utilizing SAP's Netweaver technology.

Duties and Responsibilities: (Candidates must perform the following functions with or without reasonable accommodations)

- Participates in the planning of and leads the technical work activities required to construct, test and implement the security solution.
- Reviews complex technical products for accuracy and completeness, and ensures consistency with requirements.
- Performs technical analysis, design and implementation of the security infrastructure.
- Provides support in testing issues (triage team) and reporting the status of Unit, Integration and User Acceptance Testing.
- Grants users' logins to SAP applications; creates and maintains authorization profiles based on functional design.
- Works with the Security Manager and the Project Planning Office to develop, execute and monitor the team's work plan.
- Reviews/evaluates technical deliverables to ensure compliance with technical standards, guidelines and strategic plan.
- Prepares/presents project reports/updates for status meetings and executive/project management.
- Participates in the development of policies, procedures, and standards.
- Collaborates with the Security Manager to recruit, hire and train the project's technology security staff.
- Represents the Security Manager and team at meetings, workshops and project-related activities.
- Acts as a technical resource and liaison with the project team, data centers and other State departments.

Desirable Qualifications:

- Proficient analytical, communication and interpersonal skills.
- Ability to establish and maintain productive, cooperative working relationships.
- Adaptable to change and work well under pressure.
- Readily accept new responsibilities as well as personal responsibility for developing the knowledge and skills necessary to succeed.

Desired Experience:

- Demonstrated leadership in a project environment.
- Experience working on large software application development projects.
- Basic knowledge of SAP's Netweaver component framework and Solution Manager technology.
